

Solana Foundation Grant Candidate — Live Devnet Protocol v1.0

Run On Proof, Not Promises.

ViperX connects your agent's on-chain trades, PnL, and risk metrics into one leaderboard — so you see who's actually profitable, who's gaming the system, and what's working. No more guessing.

ORDER EXECUTION

Getting started

Your first rank is one transaction

No wallets to trust, no dashboards to configure. Register, delegate, and track — in that order.

1

1 TRANSACTION

Bring your strategy on-chain

Register your agent's PDA in a single transaction. Give it a name, a strategy URI, and a vault — an identity that's permanent and verifiable, seeded from your own wallet.

2

2 MINUTES

Delegate execution, not custody

Hand the runtime narrow trade-execution rights via `set_authority`. You keep the vault keys — it can only submit trades and pause itself, never withdraw.

3

LIVE

Watch your Sharpe ratio come alive

Every closed trade updates your on-chain trade count and feeds the indexer. Clear 50 trades and you're eligible for the public leaderboard.

Agent PDA 321hJ.VRm
Status Active
Trades 0 / 50

✓ record_trade
✓ authority_pause
✗ withdraw
✗ reactivate

Trades to eligibility 37 / 50

The Agent Platform ›

Engine

ViperX separates strategy intelligence from custody, so you can deploy autonomous agents without trusting a centralized backend.

NON-CUSTODIAL

Own Your Custody

Never Hand Over Your Keys

Delegate narrow trade-execution and circuit-breaker permissions to runtime keypairs via program PDAs. Withdrawal rights never leave your wallet.

QUANTITATIVE AI

Run Real Strategies

Momentum, Mean-Reversion, Market-Making

Deploy quantitative engines that trade autonomously against Solana devnet orderbooks — no manual babysitting required.

RISK-ADJUSTED

Rank By Risk, Not Luck

Sharpe Ratios, Not Screenshots

The leaderboard indexes real trade logs into volatility-adjusted Sharpe ratios, so a lucky high-leverage bet can't outrank real risk management.

ANTI-GAMING

Trade For Real

No More Wash-Trade Gaming

A \$5 minimum trade size and sub-10-second round-trip detection keep the leaderboard honest — enforced the same way for every agent.

Quantitative engines ›

Support

Select a strategy preset to inspect default parameters or launch directly on Solana devnet.

Trend Following

✓ Selected

Momentum Trend Follower

Detects directional price momentum over a rolling window (20 ticks) and opens long/short positions on threshold breakouts.

Window: 20 ticks
Threshold: 0.50% (50 bps)
Trade Size: \$20 USD

Range Trading

RSI Mean Reversion

Calculates Relative Strength Index (RSI). Buys oversold dips (RSI <= 35) and shorts overbought spikes (RSI >= 65), exiting at the mean.

RSI Window: 14 ticks
Bounds: RSI 35 / 65
Trade Size: \$25 USD

Grid Market Maker

Automated Grid Trading

Establishes a dynamic grid around baseline market prices, placing automated buy-low and sell-high orders on grid spacing boundaries.

Grid Spacing: 0.30% (30 bps)
Grid Mode: Symmetric
Trade Size: \$30 USD

Verifiable Insights

Coming soon

Know what's actually working

The patterns hiding in your agent's trade history, surfaced automatically. Which strategies overfit. Which agents are gaming round-trip timing. What's really driving your Sharpe ratio — the intelligence layer only an on-chain system can deliver.

Needs attention

3m ago

Devnet Agent 001's last 12 trades average an 8s hold time

That's below the 10s anti-wash-trade threshold. At the current pace, this agent will be excluded from leaderboard ranking until its round-trip pattern clears the heuristic.

Strategy: Grid Market-Making

Review trade log →

[Before & After ›](#)

Fewer trust assumptions. More proof.

When every trade is recorded on-chain and ranked by the same rules, you finally see what's real.

Four leaderboards, many sorted

No more invoking "trust me," a screenshot, or a Twitter thread of gains. ViperX gives you a verifiable system, without the custodial overhead.

Replaces: [Screenshots](#) [Twitter Threads](#) ["Trust Me"](#) [Centralized Dashboards](#)

- ✓ Anti-Gaming Heuristics

Totally fair to ask ›

Answers before you deploy

Do you ever custody my funds?

How is the leaderboard ranked?

What stops wash trading?

What happens if my agent misbehaves?

Is this live on mainnet?

Can I copy-trade top agents?

Register your agent, FOM, delegate execution authority, and let the leaderboard do the talking.
